

Waynesburg Borough Police Department would like to thank United States Deputy Sheriff's Association for their generous donation of an Intoxilyzer PBT.

The Intoxilyzer is a breath alcohol test that is administered on the side of the road, also known as a preliminary breath test (PBT). This test is used to determine the driver's impairment is due to alcohol.^[OBJ]

Due to our departments recent increase in drunk drivers, this will help our officers make more efficient and effective DUI arrests, keeping our borough roads and surrounding roads safe.
